Drink-Pulser

Energizing glass quartz
stirring-stick

The Drink-Pulser harmonizes the acid in wine, champagne and fruit juices, thereby making them more easily tolerated. Whiskey, cognac and clear brandies lose their aggressive tang and are enabled to develop their full bouquet. A more intensive and clearly defined sweet flavor is produced with fruit and vegetable juices, resulting in a less artificial taste. Tap water is more palatable.

Application

Place or hold the Drink-Pulser for 30 - 60 seconds in the container of liquid — a maximum of 30 seconds in drinks with carbonic acid. Taste and experience the fascinating balancing of flavors that result! Ideally, one should drink 2 - 3 liters of fluids daily. It is unquestionably of immense importance that the fluids consumed are penetrated with dynamic energy, and as a consequence sufficiently revitalizing.

Important for the Success of a Taste Test

Pour the same drink into two separate glasses. Put the Drink-Pulser in one of the glasses, placing the second glass in a distance of approximately 30 - 40 centimeters from the first glass. Wait for about one minute. Then take a sip of the energized drink, followed by a sip of the non-energized drink. Can you taste the difference? You will definitely recognize and appreciate the difference in the superiority of the balance of flavours. Hence, energize every drink before consumption!

Tip: Most people are better able to recognize a difference in taste with acidic drinks. Therefore, it is advised to make a first test with drinks such as orange juice or wine.
